Happy

Please provide external training in various other programming technologies and create coding challenges to CSE students. Try to get more placements opportunities in core field

please teach real time subjects with real time experts with live projects instead of copy pasting. please provide minimum equipment's and facilities in lab. conduct as many workshops and motivate students what is real time industry.
and finally fight with management for sufficient funds to increase standards in college.

As a student, what I was missing is industry ready skills. I dint even knew how things work once I get onboard a job. Please emphasize the curriculum on current industry trends, web and mobile application development, cloud computing. Give the students access to internet in the computer labs. Let them explore and learn. Give them real world problems to solve. I personally think this will help the students a lot.

All ok

I would like to suggest you that students need more practical knowledge after they know the theoretical information.

IT Industry is expecting the fresher's to work directly from the curriculum expertise without any training. So my suggestion is that the fresher's should be flexible enough for adapting this kind of environment. For this fresher's need to put some effort by learning new technologies and experimenting them for a real time scenarios. So I suggest ATRI to plan some training sessions (various engaging technologies) in the college from 3rd Year and make fresher's ready with practical experience.

It should be updated with practical implementation of work force and students should be trained on communication and ability to handle teams and also adoption of various circumstances which they face in companies

Encourage students don't always beat them with lowering marks & bring good faculty where students will automatically sits in class as students sat in schools

Overall is fine

Fluent English and should be confident

Thank You
